

Important News about your Sage Software

On 1 May 2010 Sage announced that they will be withdrawing support for v12 of Sage Line 50 Accounts and Instant Accounts and also v2007 of Sage Line 50 Accounts.

What does this mean for me?

Of course your original software won't stop working, it just means that you won't be able to buy or obtain support from Sage for these versions of software in the future. It may also impact on the upgrade price as in some instances very old versions cannot be upgraded and completely new software is needed.

Why do Sage stop supporting software?

Sage can't keep supporting older versions indefinitely and you'll find that other software publishers have to do the same. Sage are always looking for ways to improve their software and have to focus on future improvements whilst ensuring that their software keeps up with legislation.

How can Griffins support me?

Griffins are Sage Accountant Partners and as such receive additional discounts on software for our clients and additional support from them to help you make a decision as to whether an upgrade will benefit your current accounting processes.

If you are interested in upgrading your current version or are unsure as to whether you need to upgrade or not, then please contact Griffins and we can advise you on the best course of action. Although we are a Sage Partner and work closely with them to develop and shape the software, we remain independent and are always totally impartial in our advice to you.

As well as being able to provide Sage software (at the best possible price) we can also offer you personalised training on how the new features would work for your particular business. We can also install the software for you and make sure that upgrading your data runs smoothly with least possible disruption to your business.
